APPLICATIONS

The VSB01(H)-Series are designed for the single power supply which is isolated from the input power supply in a distributed power supply system.

Apply to:

- 1) The input voltage is fixed (voltage variation $\leq \pm 10\%$).
- 2) The input and output isolation voltage is 1.5K or 3K VDC.
- 3) The regulation of the output voltage, ripple and noise are not demanding.

These products don't apply to:

- 1) The input supply voltage is varied (variation $\geq \pm 10\%$).
- 2) The isolation voltage between input and output is required to be >3000 VDC.

RECOMMENDED CIRCUIT

Overload Protection

The output circuit of this series has no protection against over-current and short-circuits. To connect a self-recovery fuse in series at the input end or add a circuit breaker to the circuit for protection purpose.

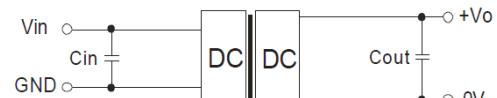

Figure 2 (IS 1.5K VDC)

Output Voltage Regulation and Over-voltage Protection Circuit

The simplest device for output voltage regulation, over-voltage and over-current protection is a linear voltage regulator with overheat protection that is connected to the input or output end in series (see Figure 2).
